ECC006 Homework Assignment #5

1. Which of the following are the three most common methods for organizing websites?
a. horizontal, vertical, and diagonal
b. hierarchical, linear, and random
c. accessible, readable, and maintainable
d. none of the above

2. Which of the following are the four principles of the Web Content Accessibility Guidelines?
a. repetition, contrast, proximity, and alignment
b. perceivable, operable, understandable, and robust
c. accessible, readable, maintainable, and reliable
d. hierarchical, linear, random, and sequential

3. Which of the following are influenced by the intended or target audience of a site?
a. the amount of color used on the site
b. the font size and styles used on the site
c. the overall look and feel of the site
d. all of the above

4. Which of the following recommended design practices apply to a website that uses images for its main site navigation?
a. Provide alternative text for the images.
b. Place text links at the bottom of the page.
c. Both a and b.
d. No special considerations are needed.

5. Which of the following is a color scheme that consists of two colors that are opposite each other on the color wheel?
a. analogous
b. complementary
c. split complementary
d. contrasting

6. Choose two sites that are similar in nature or have a similar target audience, such as the following:

- Amazon.com (http://www.amazon.com) and Alibaba.com (https://www.alibaba.com/)
- CNN (http://www.cnn.com) and MSNBC (http://www.msnbc.com)

Describe how the two sites you chose to review exhibit the design principles of repetition, contrast, proximity, and alignment.

I chose two site which are famous for Fast Typing training, 10fastfingers.com (https://10fastfingers.com/typing-test/english) and monkeytype.com (https://monkeytype.com/)

Here's a detailed description for each on of them in form of reputation, Contrast, Proximity and Alignment

	10FastFingers	**Monkey typing**
Reputation	The site repeatedly uses the same box style for words in the typing test Navigation buttons, and leaderboard share consistent fonts and colors.	The same font family and boxes shape are used in the website. The User Interfaces has repetitions, it's consistent all around the website, also it's selectable by user(customizable)
Contrast	Typed vs. untyped words are clearly differentiated However, the site has a dated design with ads and clutter, reducing visual clarity and weakening the overall contrast.	The default theme for the site view clear contrast between background and texts, however users can change the themes to anything that suits them
Proximity	Typing text is in one central block, the spaces between words is comfortable for readability	The pages are very clear and enough spaces are left between district areas, in which makes the website very appealing
Alignment	The layout is mostly centralized; however, it doesn't adapt the alignment when the language starts from right to left (like Arabic)	Everything is symmetrically aligned and all elements are fitted in structured grid. Also, it adapts different languages alignment (like Arabic)
